```

FLOW ACCOUNTING BEFORE ANALYSIS
Eligible | excluded | failed | scored units - each with denominator and reason.
Publish descriptive distributions before any inferential choice.

QUANTITATIVE BRANCH

Q1 | DENOMINATORS + DESCRIPTIVES
Per-condition denominators, distributions and missingness.
No test precedes flow accounting.

Q2 | DEPENDENCE / UNIT CHECK
Pair the same company-period or claim.
Repeated fields and claims are not independent.
Aggregate by report/company or use cluster-aware CI.

Q3 | METHOD FAMILY - ONLY IF SUPPORTED
Binary paired outcomes: an exact paired method may fit.
Non-normal paired time/edit outcomes: Wilcoxon-style analysis only if assumptions and sample support it.
The exact method is not selected here.

Q4 | EFFECT + UNCERTAINTY
Report effect size and interval, not p-values alone.
Name unit, estimator, assumptions and failures.

Q5 | MULTIPLICITY, STRATA + SENSITIVITY
Predeclare multiplicity handling or label exploratory.
Stratify only where the sample supports interpretation.
Repeat with failures and justified exclusions included.
Preserve negative, null and unexpected regressions.

QUALITATIVE BRANCH

K1 | AUTHORISED INPUTS ONLY
Pre-defined error taxonomy + consented reviewer feedback.
No feedback without authority and consent.

K2 | PRE-DEFINED CODE FAMILIES

ID	EXT	NORM
TIME	PROV	VER
REP	SEC	HITL

K3 | CASE-BY-CODE FRAMEWORK MATRIX
Rows = cases; columns = code families and additions.
Retain exact report, claim, event and feedback locator.

K4 | VERSIONED CODING + DISAGREEMENT
Record coder, codebook/version, reason and resolution.
No silent overwrite; agreement is not source truth.

K5 | PATTERNS, NEGATIVE CASES + LIMITS
Compare patterns within and across cases.
Retain contradictions, minority patterns and exceptions.
Report consent, coverage and researcher influence.
Do not turn purposive feedback counts into population frequencies or generalised prevalence.

INTEGRATED INTERPRETATION
Effect and uncertainty + patterns and negative cases -> explicit limitations.
Keep executed evidence, evidence class and unresolved holds visible.

STOP / TO FREEZE
Exact statistical method and sample size are not selected now
Wait for D1 variance/annotation evidence + supervisor/statistical review.
No inferential result is asserted.

Faye Niu | METH-F3 | author synthesis: conceptual and non-empirical; preserve negative, null and regressive outcomes.
